

This book is intended to be an index of representative space photographs available from NASA. Color 4-by-5-inch transparencies and black-and-white 8-by-10-inch glossies are available free to information media. Transparencies are loaned for a limited period and must be returned. Non-information media may obtain identical material at a laboratory service charge through a photographic contractor. For information write: Audio Visual Branch, Public Information Division, Code FP, National Aeronautics and Space Administration, 400 Maryland Avenue, S.W., Washington, D.C. 20546

These photographs are government publications — not subject to copyright. They may not be used to state or imply the endorsement by NASA or by any NASA employee of a commercial product, process or service, or used in any other manner that might mislead. Accordingly, it is requested that if any photograph is used in advertising, posters, books, etc., layout and copy be submitted to NASA prior to release.

	GEMINI IV	June 3, 1965		Manned; Long Duration: James A. McDivitt and Edward H. White; 62 orbits, 97 hours, 59 minutes. First U.S. extravehicular activities (22 minutes duration) and first use of personal propulsion unit (both by White). A program of eleven scientific experiments was successfully conducted. Near-rendezvous with booster not achieved.
	TIROS X (OT-1)	July 2, 1965	TAD	Meteorology: First Weather Bureau funded spacecraft; spin-stabilized configuration with two 104 TV cameras, similar to TIROS VI, Placed in near-perfect sun-synchronous orbit.
•	PEGASUS III	July 30, 1965	Saturn I (SA-10)	Micrometeoroids: Last of current Pegasus program. Removable "coupons" added for possible retrieval of thermal coating samples for degradation and cratering study. Last of Saturn I vehicle program with 10 out 10 successes.
	CENTAUR TEST (AC-6)	Aug. 11, 1965	Atlas-Centaur	Vehicle Development: 4th successful Atlas-Centaur launch accurately injected Surveyor dynamic model into simulated lunar transfer trajectory; demonstrating capability of guidance system.
	GEMINI V	Aug. 21, 1965	Titan II	Manned: L. Gordon Cooper, Jr., and Charles Conrad, Jr.; 120 revs. 190 hours, 56 minutes (8 days). Demonstrated physiological feasibility of lunar mission; evaluated S/C performance. Successful simulated rendezvous and 16 of 17 experiments performed; first Gemini use of fuel cell.

Thor-Delta . . . . . Solar Physics: Spacecraft similar to OSO-I and II; failed to orbit: premature ignition of 4th stage (X258)

Aug. 25, 1965

NAME	LAUNCH	VEHICLE	MISSION/REMARKS
GEMINI IX-A	June 3, 1966 June 1, 1966	Titan II	Manned: Thomas P. Stafford and Eugene A. Cernan; 44 revolutions; 72 hrs. 21 min. Unable to dock with ATDA (backup for Gemini Target Vehicle) when shroud failed to clear docking adapter 2 hrs. 2 min of EVA accomplished; use of Astronaut Maneuvering Unit prevented by difficulty of donning unit and fogging of spacesuit faceplate.
OGO-III	June 7, 1966	Atlas Agena-B	Interdisciplinary Studies: First fully successful OGO; first three-axis stabilization in highly elliptical Earth orbit (viewing Earth, space, Sun and orbital plane). Planned apogee reduced to assure Earth tracking throughout orbit. Essentially same experiment complement as OGO-1.
PAGEOS I	June 24, 1966	TAT	Geodesy: Establish world-wide triangulation network by optical sightings of OCHO-I type sphere. (100 ft. dia.).
EXPLORER XXXIII (IMP-D)	July 1, 1966	TAD	Particles and Fields: Planned anchored lunar orbit not obtained. Excess energy orbit produced by launch vehicle precluded lunar capture; consequently S/C was placed in highly elliptical orbit about the Earth.
APOLLO SATURN	July 5, 1966	15A-2031	Launch Vehicle Development: Liquid hydrogen evaluation flight of the S-IV-B stage vent and restart capability. Also test of S-IV-B/IU separation and cryogenic storage at zero "G". Flight terminated during liquid hydrogen pressure and structural test.

NAME	LAUNCH	VEHICLE	MISSION/REMARKS
GEMINI XI	Sept. 12, 1966 Sept. 12, 1966	Titan II	Manned: Charles Conrad, Jr. and Richard F. Gordon, Jr.; 44 revolutions; 71 hours, 17 min. Rendezvous and dock achieved in 1 hr. 34 min. within first S/C revolution. 2 hours 55 min. EVA by Gordon; umbilical EVA 44 min. Tethered S/C experiment successful highest apogee; 739 nm; computer controlled recentry.
SURVEYOR II	Sept. 20, 1966	Atlas-Centaur (AC-7)	Lunar Exploration: During midcourse maneuver one of the three spacecraft's vernier engines did not ignite causing incorrectable tumbling. Contact lost 5 1/2 hours prior to predicted impact time.
ESSA III (TOS-A)	Oct. 2, 1966	Delta (DSV-3E)	Meteorology: First Advanced Vidicon Camera System (AVCS) in Tiros/TOS series; also carried IR earth heat balance sensor, Advanced cartwheel design; placed in near polar sun synchronous orbit. First Delta vehicle launch from Western Test Range (WTR). Tape recorder aboard now inoperable.
CENTAUR TEST IX (AC-9)	Oct. 26, 1966	Atlas-Centaur	Vehicle Development: Second "two-burn" test for parking orbit, indirect ascent capability; eight and final Centaur development test planned. Surveyor mass model injected into simulated lunar transfer orbit.
INTELSAT II (HS-303A) NON-NASA Mission	Oct. 26, 1966	Delta (DSV-3E)	Communications: Second ComSat Corp. commercial satellite, NASA providing reimbursable launch support. Apogee motor nozzle blown off shortly after motor ignited. Planned geostationary orbit not achieved; Spacecraft orbit allows about 8 hrs. of use per day.

NAME	LAUNCH	VEHICLE	MISSION/REMARKS
LUNAR ORBITEF	R II Nov. 6, 1966	Atlas-Agena	. Lunar Photography: Spacecraft completed taking 211 Frames (422 medium and high resolution pictures on Nov. 26. Spacecraft has responded to over 2,870 commanc; and performed over 280 maneuvers. Readout was completed December 6.
GEMINI XII	Nov. 11, 1966 Nov. 11, 1966	Titan II	. Manned: James A. Lovell, Jr. and Edwin E. Aldrin, Jr.; 59 revs; 94 hrs. 34 min. Final mission of Gemini series emphasized evaluation of EVA (Aldrin: 5 hrs. 37 min.) tasks workload including two "standups" totaling 208 min. and 129 min. of umbilical EVA. Also 14 scientific experiments performed and solar eclipse pictures taken. The target vehicles primary propulsion not usable for high elliptical orbit maneuver.
ATS-I	Dec. 7, 1966	Atlas-Agena	Applications and Technology: Synchronous, circular equatorial orbit over 151 W. long. (near Hawaii) with apogee of 19,627 NM and perigee of 19,561 NM on Dec. 19. The Spin Scan Cloud Came a returned the first photo covering nearly the entire disc of the earth on Dec. 9 and has returned more than 2,500 similar photos since that date. Communications, spacecraft technology and science experiments included in payload.
BIOSATELLITE I	Dec. 14, 1966	Delta (DSV-3G)	Biology: Spacecraft completed three days of operation with good environmental control and attitude control. All biological experiment events occurred. The radiation source functioned as planned. Retro-fire did not occur and recovery was not possible. Spacecraft reentered bullwas not recovered.

NAME	LAUNCH	VEHICLE	MISSION/REMARKS
EXPLORER XXXIV (IMP-F)	May 24, 1967	Delta	. Particles and fields: Fifth IMP spacecraft. Investigating region between the magnetosheath and the shock front. Launched during Class III Bright solar flare.
ESRO II-A NON-NASA Missid	May 29, 1967 on	Scout	. Solar Astronomy and Cosmic Rays. All telemetry lost eight seconds prior to third stage cut-off, No fourth stage burn, Satellite landed in South Pacific.
MARINER V	June 14, 1967	A.tlas-Agena	. Planetary and Interplanetary Exploration: All experiments operating, Midcourse correction was successful on June 19. Scheduled to arrive at Venus October 19.
SURVEYOR IV	July 14, 1967	Atlas-Centaur	Lunar Exploration: All launch vehicle and spacecraft performance nominal until last two seconds of 42 second retro burn when all communications were lost with pacecraft, Target site: Sinus Medii.
EXPLORER XXXV (IMP-E)	July 19, 1967	Delta (DSV-3E)	.Particles and Fields: Lunar orbit achieved July 22 first without mid-course correction capability, permitting more detailed study of Earth's magnetosphere. No lunar magnetic field or "bow shock wave" yet observed. All eight experiments providing good data.
CGO-IV (OGO-D, POGO)	July 28, 1967	TAT-Agena	Interdisciplinary Studies: Similar to OGO-II, to obtain data during increased solar activity to complement near solar minimum OGO-II data, Carries 20 experiments (10 from 9 universities, one foreign; 5-GSFC; 1-JPL; 1-SAO; 2-NRL; 1-CRL) emphasizing atmospheric/ionospheric phenomena of near-Earth environment.

NAME	LAUNCH	VEHICLE	MISSION/REMARKS
LUNAR ORBITER V	Aug. 1, 1967	Atlas-Agena	Lunar Photography: Last, most ambitious project mission completed mapping of entire lunar surface. Specifically provided: detailed coverage of 36 scientific interest sites; 5 Apollo sites; completed high altitude far side coverage; a full view of Earth in near full phase. One hundred percent readout accomplished of all 212 frames taken; continues to provide near-lunar micrometeoroid and radiation data.
BIOSATELLITE II	Sept. 7, 1967	Delta (DSV-3G)	Biology: First successful U.S. satellite exclusively for bioscience; obtained excellent data on specimens of cells, plants, and low order animals; reentered one day early due to adverse weather forecast for recovery (by aircatch) area and problems in commanding the spacecraft.
SURVEYOR V	Sept. 8, 1967		Lunar Exploration: First alpha scatter data; indicated basaltic character of area sampled in Mare Tranquillitatus, 23.19°E and 1.52°N. Achieved 83 hrs. alpha scatter data and 18,006 photos in first lunar day. Survived first lunar night but, as expected, subsequent data obtained of lower quality.
INTELSAT II-D (HS-303A) Non-NASA Mission	Sept. 28, 1967		Communications: ComSat commercial satellite, similar to Intelsats II-A, B and C with up to 240 voice channels; to supplement and backup B over Pacific about 176°E. Provides test of minimum angular separation of B and D without intersatellite interference, NASA cooperating in planning tests. Reimbursable launch support.

NAME	LAUNCH	VEHICLE	MISSION/REMARKS
Apolio 15 (AS-510/CSM- 112/LM-10)	July 26, 1971	Saturn V	. Fourth manned lunar landing and first of Apollo "J" series missions which carry Lunar Roving Vehicle. Astronauts: David R. Scott, Alfred M. Worden, and James Bensen Irwin. Total flight time was 295 hrs, 11 min, 53 sec. Total EVA time was 18 hrs, 34 min Worden's in-flight EVA was 38 min, 12 sec performed out-of-earth orbit. Splashdown in Pacific about 288 nautical miles due north of Pearl Harbor. Estimated amount of samples returned for scientific study approximately 180 lbs.
Cooperative Applications Sat. CAS-A/EOLE-1	Aug. 16, 1971	Scout	Data Collection: Cooperation of the United States with France in a Space Meteorology Project using instrumented balloons and an earth orbiting satellite to obtain in-situ speed and direction of winds (air masses) at various altitudes.
Barium Ion Clou J (GRS-B)	Sep. 20, 1971	Scout	A joint NASA/German effort to study the broad features of electric and magnetic fields in the outer radiation belt by optical investigation of the behavior of a barium ion cloud released at several earth radii alf Lude. Vehicle provided by NASA on non-reimbursable basis
050-Н (7)	Sep. 29, 1971	Delta	To observe the active physical processes on the sun by which the sun influences the earth and its space environment; and to advance our understanding of the sun's constitution and behavior,
iTOS-B	Oct. 21, 1971	Delta	. To provide improved operational infrared and visual observations of earth cloud cover for use in weather analysis and forecasting. NASA reimbursed by NOAA for both spacecraft and launch support. Mission failure due to vehicle second stage malfunction.

73-H-993	73-HC-816	In flight configuration of Mariner 10 spacecraft.
73-H-1074	73-HC-853	Mariner launched by an Atlas-Centaur From Cape Kennedy on November 3, 1973.
		VENUS
74-H-83	_	Lighted cusp of North Pole taken from 5,000 miles.
74-H-88	_	Haze layers on limb, photographed in orange light.
74-H-84	_	Mosaic picture of nearly full planet, taken from a distance of 440,000 miles.
74-H-82	-	Southern hemisphere, spiral-like markings seen only through UV filters taken from a range of about 450,000 miles on February 6, 1974.
74-H-87	-	Ultraviolet television camera picture taken on February 6, 1974 from a range of 490,000 miles show dark features toward top-part of dark belt in Venus clouds over equatorial region.
74-H-86		UV picture taken on February 6, 1974 from range of 490,000 miles.
74-H-85	-	Mosaic of pictures taken February 6, 1974 from range of 525,000 miles—cloud pattern seen only in UV light show general circulation of upper atmosphere of Venus.
74-H-150	e ÷	Venus, 85 percent illuminated, taken February 9, 1974 from a distance of 1,725,000 miles.

## MARINER X

B&W Photo No.	Color Photo No.	Description
74-H-185	74-HC-133	Individual Venus TV frames were computer-enhanced, mosaicked and retouched, taker February 6, 1974 from a distance of 450,000 miles.
74-H-186	-	Series of photomosaics taken at seven-hour intervals February 7, 1974—sh w rapid rotation of light and dark markings at top of Venus' thick cloud deck.
		MERCURY
74-H-217	_	Partially illuminated disc taken March 24, 1974 from a distance of 2,700,000 mile
74-H-219	-	Computer-enhanced and enlarged picture taken March 25, 1974 from a distance of 2,190,000 miles.
74-H-223	olegen	Two pictures"real time" and enhanced photos taken March 26, 1974 from a distant of 1,705,000 miles.
74-H-222	-	Computer-enhanced view taken on March 27, 1974 from a distance of 1,141,00 miles—craters as small as 100 miles across can be made out along right edge of crescer
74-H-227		Computer-enhanced view taken on March 28, 1974 from 590,240 miles—abundance craters near evening terminator seen.
74-H-226	-	Computer-enhanced view taken on March 29, 1974 from 310,000 miles-120 micraters and 6.8 mile craters detected.
74-H-229		Southwestern quadrant taken March 29, 1974 from 122,000 miles-largest crater seen ( miles in diameter.

#### MARINER X

B&W Photo No.	Color Photo No.	Description
74-H-239	-	Mosaic of about two-thirds of Mercury's southern hemisphere taken March 29, 1974 from 124,000 miles—cratered surface is similar to cratered highlands on the Moon—largest craters are 124 miles in diameter.
74-H-240		Conspicuous bright crater on rim of larger older crater taken March 29, 1974 from distance of 55,000 miles—bright-floored crater is 25 miles in diameter.
74-H-230		Heavily-cratered surface with many low hills taken March 29, 1974 from an altitude o 21,700 miles-shows large valley 4 1/2 miles wide and 62 miles long.
74-H-231		Cratered terrain similar to that on the Moon taken March 29, 1974 from 19,30 miles—shows large flat-floored crater 62 miles in diameter.
74-H-233		Fresh new crater 7 1/2 miles across in center of older crater basin taken March 29, 197 from 12,860 miles—picture covers an area 90 by 105 miles.
74-H-232	-	Densely cratered surface taken March 29, 1974 from 8,085 miles—portion of 38 mi crater shows flow front extending across crater floor and filling more than half crater—smaller fres crater at center is about 15 miles in diameter—craters as small one-half mile across are visible.
74-H <i>-</i> 241	-	Taken only minutes after Mariner 10 made its closest approach on March 29, 1974 fro a distance of 3,700 miles—craters as small as 500 feet can be seen—relatively level surfa contrasts with abundant relief seen in some closeup view on opposite side of planet.

#### SPACE COLONY

DESCRIPTION	B&W PHOTO NO.	COLOR PHOTO NO.
Twin 19 mile long, 4 mile in diameter cylinders are seen as they would appear from an approaching spaceship	75-H-461	75-HC-272
Earth-like landscape from inside a 19 mile long space colony seen from the endcap	75-H- <b>46</b> 0	75-HC-271
Inside view of the colony as night approaches. This view is seen from the endor ).	75-H-82 <b>4</b>	75-HC-471
A view showing a bridge similar in size to the San Francisco Bay Bridge to emphasize eventual sizes of such colonies	75-H-823	75-HC-470
Outside view of a wheel-like colony that would be over a mile in diameter	75-H-822	75-HC-469
A segment of the torus-shaped space colony is shown during final construction	75-H-821	75-HC-468
Agricultural area of a space colony	76-H-282	76-HC-99
Photo of a model of the space colony's manufacturing facility.	76-H-542	76-HC-650
Photo of a model of a docking station for space colony	76-H-540	76-H-648
Illustration of a space colony that looks like a giant wheel in space	76-H-541	76-HC-649
Artist's concept of the interior of the torus or outer ring of the space colony	76-H-539	76-HC-647
